

Construction Management & Documents

Joy Biswas

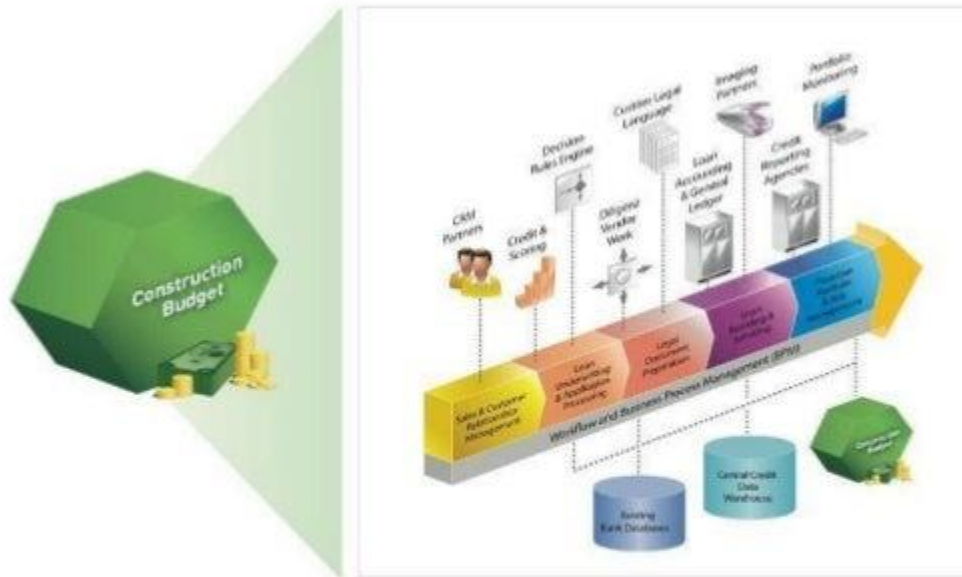

Jr. Instructor

Department of Civil Technology

Construction Budget and Cost Control

It covers the methods and procedures used in budgeting, procuring, and controlling the cost of commercial construction projects, as well as forecasting, monitoring, and appraising project cost performance through the use of manual and computer techniques. CM needs to apply methods of controlling and projecting material, labor, and equipment costs in order to identify problem areas during construction and take the necessary steps to avoid financial losses.

Construction Budget and Cost Control

[Job Site Management]

This Area addresses construction project management components from the contractor's perspective, with an emphasis on publicly owned projects. You examine all facets of project management tools on jobsite and the expected roles of the site management team (project managers, project/field engineers and superintendents) as well as all aspects of a typical, large-sized project from project planning to closeout. CM needs management skills and techniques to effectively manage construction jobsite projects..
