MY SQL SELECT STATEMENT

1. The `SELECT` statement is used to select data from a database.

2. The data returned is stored in a result table, called the result-set.
3. `SELECT` *column1*, *column2, ...*

    `FROM` *table_name;*

    Here, column1, column2, ... are the field names of the table you want to select data from. If you want to select all the fields available in the table, use the following syntax:

    `SELECT` * `FROM` *table_name;*

4. `SELECT` CustomerName, City, Country `FROM` Customers;

    The following SQL statement selects the "CustomerName", "City", and "Country" columns from the "Customers" table.
